Clear Ballot is transforming election technology with ClearMark, the first accessible ballot marking device to print an identical paper ballot on a thermal printer. ClearMark is designed to better meet the needs of election officials and provide voters with a fast, seamless voting experience.

Flexible

- Prints multiple ballot styles and lengths on-demand without changing paper
- Available as table-top or with a transport case
- Quickly activates voting sessions with smart cards

Accessible

- Runs software that was usability tested at Perkins School for the Blind
- Allows UI adjustments for color contrast, text size, and audio speed
- Supports multiple languages for voters

Verifiable

- Prints double-sided ballots with marked choices for voters to review
- Provides voter anonymity with identical, full-faced paper ballots
- Optional attached scanner verifies ballots and voter selections before being cast

Efficient

- Minimizes money, time, and resources: no ink, toner, or stacks of unused pre-printed ballots
- Thermal printer and continuous paper roll print ballots in seconds
- Large ballot printing capacity handles high-traffic polling locations
