tailored for all pre-voting and post-voting activities. The Democracy Suite EMS consists of the following components:

2.4.1 Election Event Designer (EED) Client Application is the primary application used for the definition and management of election event. EED is responsible for the definition of election projects. Each election project is represented as an instance of the election domain database with associated set of election project file based artifacts. The definition of the election project will be initiated by importing the election data from the SCORE system. It is important to note that an election project initiated by importing data can be further modified within the EED Client Application.

The EED can generate two types of paper ballots:

- Proofing ballots – ballots produced to allow election project stakeholders to proof ballot content and styling. These ballots cannot be processed by the ImageCast® as they don't have proper ballot barcodes. These ballots are overprinted with the text "Proofing Ballots – date/time"
- Official ballots – represent production ready, press ready ballots in PDF format with barcodes and without any overprinting.

2.4.2 Results Tally and Reporting (RTR) Client Application is the application used for the tally, reporting and publishing of election results.

2.5 **Democracy Suite EMS Software (Advanced Express)** consists of the following components:

2.5.1 Election File and iButton Creation Customer is authorized to create Election Files and iButtons from Democracy Suite to load on the ICE and ICC units.

2.5.2 Results, Tally and Reporting (RTR) Client Application is the application used for the tally, reporting and publishing of election results.

2.6 **ImageCast® Adjudication Application** is a client and server application used to review and adjudicate ImageCast® Central Scanner ballot images. The application uses tabulator results files and scanned images to allow election administrators to make adjudications to ballots with auditing and reporting capabilities. The Adjudication Application examines such voter exceptions as overvotes, undervotes, blank contests, blank ballots, write-in selections, and marginal marks. The application works in two basic modes: election project setup and adjudication. The Adjudication Application can be used in a multi-client environment. Adjudication Application eliminates the need to physically rescan ballots, which can potentially damage the originals and cause chain-of-custody concerns.

2.7 **ImageCast® X Application** is an application used for touchscreen voting on tablets at a voting location, and a Democracy Suite election database. Voting sessions are initiated on the tablet by either a Smart card or the entry of a numeric code based on activation. The ballot is loaded directly onto the standalone device. All voting activity is performed at the tablet, including accessible voting. Accessible voting interfaces connect to the tablet via an adapter that supports most accessible

devices, allowing voters to bring their own device. After review and completion of the ballot selections, a paper ballot is created for the voter from a printer in the voting booth, and the ballot is cast after insertion in a ballot box. The paper ballot is the official ballot. The ballots contain a textual representation of the voter's ballot selections for visual review and confirmation, and the ballots are scanned using ImageCast Central Scanner and the results are accumulated in Democracy Suite RTR.

- 2.8 **Mobile Ballot Production** is an application used to search, preview and print ballots via a local printer device. The application makes use of ballot information and PDFs produced by the Election Event Designer application and information provided through the customer voter registration system.
 - 2.9 **Automated Test Deck Application** is an application used to create accurate test packs for running Pre-Logic and Accuracy Test with optional marking pattern requirements. The application can be used to access the election database and produce a set of print-ready PDFs and results tables

This sublicense is conditioned on Licensee’s continued compliance with the terms and conditions of the end-user licenses contained on or in the media on which such software is provided.
- 2.3. No Other Licenses. Other than as expressly set forth in this Agreement, (a) Licensor grants no licenses, expressly or by implication, and (b) Licensor’s entering into and performing the Agreement will not be deemed to license or assign any intellectual property rights of Licensor to Licensee or any third party. Without limiting the foregoing sentence, Licensee agrees not to use the Software as a service bureau for elections outside the Licensee’s jurisdiction, except as otherwise provided in Section 8, and agrees not to reverse engineer or otherwise attempt to derive the source code of the Software. Except as otherwise provided in Section 8, the Licensee shall have no power to transfer or grant sub-licenses for the Software. Any use of all or any portion of the Software not expressly permitted by the terms of this Agreement is strictly prohibited.

3. Payment. In consideration of the grant of the license, the Licensee shall pay the fees set forth in Exhibit A of this Agreement.

4. Upgrades and Certification. During the Term, Licensor may provide upgrades to Licensee under the following terms and conditions.

4.1. Upgrades. In the event that Licensor, at its sole discretion, certifies a software upgrade under the applicable provisions of the election laws and regulations of the Licensee's State, Licensor shall make the certified software upgrade available to the Licensee.

4.2. Certification Requirement. Notwithstanding any other terms of this Agreement, Licensor shall not provide, and shall not be obligated to provide under this Agreement any upgrade, enhancement or other software update that has not been certified under the applicable provisions of the election laws and regulations of the Licensee's State.

5. Warranties. The following warranties will apply to all Software during the Term.

5.1. Software. Licensor warrants that during the Term, the Software will function substantially in accordance with the Specification. If the Licensee believes that the Software is not functioning substantially in accordance with the Specifications, the Licensee shall provide Licensor with written notice of the material failure within thirty (30) days of discovering the material failure, provided that the Licensee can reproduce the material failure to Licensor. The foregoing warranty shall be void in the event of the Software (i) having been modified by any party other than Licensor or (ii) having been used by the Licensee for purposes other than those for which the Software was designed by Licensor. If Licensor establishes that the reported material failure is not covered by the foregoing warranty, the Licensee shall be responsible for the costs of Licensor's investigative and remedial work at Licensor's then current rates.

5.2. Third-Party Products. The warranties in this Section 5 do not apply to any Third-Party Products. However, to the extent permitted by the manufacturers of Third-Party Products, Licensor shall pass through to Licensee all warranties such manufacturers make to Licensor regarding the operation of such Third-Party Products. Licensor shall assist Licensee in making warranty claims for Third-Party Products that do not permit Licensor to pass warranties through to Licensee.

5.3. NO OTHER WARRANTIES. LICENSOR DISCLAIMS ALL OTHER REPRESENTATIONS AND WARRANTIES, WHETHER WRITTEN, ORAL, EXPRESS, IMPLIED OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE AND ANY WARRANTY BASED ON A COURSE OF DEALING, COURSE OF PERFORMANCE OR USAGE OF TRADE.
