Identified during
testing of machines

How to hack an unsecured port

7 seconds to hack

BASH BUNNY

\$119.99

The groundbreaking payload platform that introduced multi-vector USB attacks has evolved.

Pull off covert attacks or IT automation tasks faster than ever with just the flick of a switch. The NEW Bash Bunny Mark II goes from plug to pwn in 7 seconds — so when the light turns green it's a hacked machine.

Now with **faster performance, wireless geofencing, remote triggers and MicroSD support**, the Bash Bunny is an even more impressive tool for your Red Team arsenal.

Simultaneously mimic multiple trusted devices to trick targets into divulging sensitive information without triggering defenses. The Bash Bunny is truly the world's most advanced USB attack platform.

Missouri Elections are Impossible to Validate

A Message to the People of Missouri from MO Canvassers – residents who were concerned about elections in our state and took action.

Trust in government begins with trust in our elections.

1st Report on Voter Roll Analysis, Canvassing, and Election Integrity Issues in the State of Missouri

There is NO “final” list of everyone who voted in any Missouri election

It is impossible to verify who voted in, or conduct a full audit of, any Missouri election.

Page 3

Missouri voter rolls are inflated

The voter rolls are “dirty” with names of thousands who moved, died, or have not voted in decades.

Page 5

Votes were counted for ‘phantoms’, and ‘lost’ for actual voters

Canvassing door-to-door, citizen-to-citizen uncovered ‘Phantom,’ ‘Lost,’ and even ‘Stolen’ votes.

Page 7

Voting equipment can connect to the internet

Research shows electronic voting equipment is complex, hackable, and can be manipulated.

Page 9

Scientific and non-partisan investigations have uncovered election fraud

Fraud in the November 2020 election has *not* been debunked.

Page 11

Missouri residents have lost control of their elections

Outsiders manage and influence Missouri elections using money, voter roll maintenance, and election equipment.

Page 13

The Bottom Line

Reclaiming local control is essential for trusted and verifiable elections in Missouri

<https://frankspeech.com/article/missouri-elections-are-impossible-validate>

<https://frankspeech.com/video/introduction-missouri-election-watch-project>

Missouri Election Watch Project

The Missouri Election Watch Project is a grassroots effort to monitor our elections and submit failures, fraud, anomalies, and anything ‘fishy’ via Incident Reports. Projects are created to watch Public Testing of Machines, Voter Experience, and Procedures at the Polls.

Anyone can participate: voters, candidates, poll workers, election officials, and concerned citizens. The Project is coordinated by Missouri Canvassers and supported by Cause of America – Missouri.
